## 2. CPVC Piping System

1) Size of CPVC Piping by Each Standard

| Nominal Diameter | Diameter (Outer) (mm) | Diameter (Inner) (mm) | Thickness (mm) | $\underset{\text { M }}{\text { Weight/1 }}$ <br> (g) | Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1" (25) | $\begin{gathered} 33.40 \sim 33.50 \\ (33.45 \pm 0.05) \end{gathered}$ | 28.02 | $\begin{gathered} 2.46 \sim 2.97 \\ (2.46+0.51) \end{gathered}$ | 400.9 | 1180101 |
| 1-1/4" (32) | $\begin{gathered} 42.20 \sim 42.30 \\ (42.25 \pm 0.05) \end{gathered}$ | 35.50 | $\begin{gathered} 3.12 \sim 3.63 \\ (3.12+0.51) \end{gathered}$ | 630.3 | 1180102 |
| 1-1/2" (40) | $\begin{gathered} 48.25 \sim 48.35 \\ (48.30 \pm 0.05) \end{gathered}$ | 40.63 | $\begin{gathered} 3.58 \sim 4.09 \\ (3.58+0.51) \end{gathered}$ | 819.2 | 1180103 |
| 2" (50) | $\begin{gathered} 60.30 \sim 60.40 \\ (60.35 \pm 0.05) \end{gathered}$ | 50.88 | $\begin{gathered} 4.47 \sim 5.00 \\ (4.47+0.53) \end{gathered}$ | 1265.1 | 1180104 |
| 2-1/2" (65) | $\begin{gathered} 73.08 \sim 73.18 \\ (73.13 \pm 0.05) \end{gathered}$ | 61.65 | $\begin{gathered} 5.41 \sim 6.07 \\ (5.41+0.66) \end{gathered}$ | 1858.4 | 1180105 |
| 3" (80) | $\begin{gathered} 89.00 \sim 89.10 \\ (89.05 \pm 0.05) \end{gathered}$ | 75.10 | $\begin{gathered} 6.58 \sim 7.37 \\ (6.58+0.79) \end{gathered}$ | 2750.3 | 1180106 |
| 4" (100) | $\begin{aligned} & 114.40 \sim 114.50 \\ & (114.45 \pm 0.05) \end{aligned}$ | 96.51 | $\begin{gathered} 8.46 \sim 9.48 \\ (8.46+1.02) \end{gathered}$ | 4545.5 |  |

## 2) Size of CPVC fittings by Each Standard

| Nominal Fitting size | ФА | ФВ | C | D | E | Real Size Of Pipe |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Diameter Of End | Inner Diameter | Depth Of Socket | Diameter Of Body | Thickness Of Socket |  |
| 1" (25) | $33.66 \pm 0.10$ | $33.27 \pm 0.10$ | 28.58 (Above) | 23.14 (Above) | 4.55 (Above) | 33.45 |
| 1-1/4" (32) | $42.42 \pm 0.10$ | $42.04 \pm 0.10$ | 31.75 (Above) | 31.17 (Above) | 4.85 (Above) | 42.25 |
| 1-1/2" (40) | $48.56 \pm 0.10$ | $48.11 \pm 0.10$ | 34.93 (Above) | 36.73 (Above) | 5.08 (Above) | 48.30 |
| 2" (50) | $60.63 \pm 0.10$ | $60.17 \pm 0.10$ | 38.1 (Above) | 47.78 (Above) | 5.54 (Above) | 60.35 |
| 2-1/2" (65) | $73.38 \pm 0.15$ | $72.85 \pm 0.15$ | 44.45 (Above) | 57.15 (Above) | 7.01 (Above) | 73.15 |
| 3" (80) | $89.31 \pm 0.15$ | $88.70 \pm 0.15$ | 47.63 (Above) | 71.63 (Above) | 7.62 (Above) | 89.05 |
| 4" (100) | $114.76 \pm 0.20$ | $114.07 \pm 0.20$ | 57.15 (Above) | 94.92 (Above) | 8.56 (Above) | 114.45 |

2. CPVC Piping System
1) Tee

| Name | Size | Code |
| :---: | :---: | :---: |
| Tee | 25 mm | 1180201 |
|  | 32 mm | 1180261 |
|  | 40 mm | 1180228 |
|  | 50 mm | 1180236 |
|  | 65 mm | 1180239 |
|  | 80 mm | 1180246 |

2) Elbow

| Name | Size | Code |
| :---: | :---: | :---: |
| Elbow | 25 mm | 1180205 |
|  | 32 mm | 1180206 |
|  | 40 mm | 1180207 |
|  | 50 mm | 1180208 |
|  | 65 mm | 1180238 |
|  | 80 mm | 1180245 |

## 2. CPVC Piping System

3) Socket

| Name | Size | Code |
| :---: | :---: | :---: |
| Socket | 25 mm | 1180209 |
|  | 32 mm | 1180210 |
|  | 40 mm | 1180211 |
|  | 50 mm | 1180212 |
|  | 65 mm | 1180237 |
|  | 80 mm | 1180244 |

4) Socket Reducer

| Name | Size | Code |
| :---: | :---: | :---: |
| Socket Reducer | $32 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180213 |
|  | $40 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180230 |
|  | $40 \mathrm{~mm} \times 32 \mathrm{~mm}$ | 1180214 |
|  | $50 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180260 |
|  | $50 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180215 |
|  | $65 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180274 |
|  | $65 \mathrm{~mm} \times 50 \mathrm{~mm}$ | 1180242 |
|  | $80 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180273 |
|  | $80 \mathrm{~mm} \times 50 \mathrm{~mm}$ | 1180272 |
|  | $80 \mathrm{~mm} \times 65 \mathrm{~mm}$ | 1180248 |

2. CPVC Piping System
5) Branch Reduced Tee (BRT)

| Name | Size | Code |
| :---: | :---: | :---: |
| BRT | $32 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180202 |
|  | $40 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180203 |
|  | $40 \mathrm{~mm} \times 32 \mathrm{~mm}$ | 1180259 |
|  | $50 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180204 |
|  | $50 \mathrm{~mm} \times 32 \mathrm{~mm}$ | 1180227 |
|  | $50 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180231 |
|  | $65 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180251 |
|  | $65 \mathrm{~mm} \times 32 \mathrm{~mm}$ | 1180252 |
|  | $65 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180253 |
|  | $65 \mathrm{~mm} \times 50 \mathrm{~mm}$ | 1180241 |
|  | $80 \mathrm{~mm} \times 25 \mathrm{~mm}$ | 1180255 |
|  | $80 \mathrm{~mm} \times 40 \mathrm{~mm}$ | 1180256 |
|  | $80 \mathrm{~mm} \times 50 \mathrm{~mm}$ | 1180257 |
|  | $80 \mathrm{~mm} \times 65 \mathrm{~mm}$ | 1180247 |

6) Valve Socket (PT)

| Name | Size | Code |
| :---: | :---: | :---: |
| Valve Socket | 25 mm | 1180229 |
|  | 32 mm | 1180218 |
|  | 40 mm | 1180219 |
|  | 50 mm | 1180220 |
|  | 65 mm | 1180240 |
|  | 80 mm | 1180249 |

## 2. CPVC Piping System

7) Valve Socket (for connecting SP Joint)

| Name | Size | Code |
| :---: | :---: | :---: |
| Valve Socket <br> (for SP joint : 11T) | 25 mm | 1180217 |
| Valve Socket <br> (for SP joint : P1.5) | 25 mm | 1180226 |

2. CPVC Piping System

10) Flange

| Name | Size | Code |
| :---: | :---: | :---: |
| Flange | 40 mm | 1180275 |
|  | 50 mm | 1180276 |
|  | 65 mm | 1180243 |
|  | 80 mm | 1180250 |

## 2. CPVC Piping System

11) Fittigns for $\operatorname{PT}\left(1 / 2^{\prime \prime}\right)$

| Name | Size | Code |
| :---: | :--- | :---: |
| Socket | $25 \mathrm{~mm} \times 1 / 2^{\prime \prime}$ <br> $(15 \mathrm{~mm})$ | 1180269 |
| Elbow | $25 \mathrm{~mm} \times 1 / 2^{\prime \prime}$ <br> $(25 \mathrm{~mm})$ | 1180270 |
| Tee | $25 \mathrm{~mm} \times 1 / 2^{\prime \prime}$ <br> $(15 \mathrm{~mm})$ | 1180271 |

12) $30^{\circ}$ Elbow $/ 60^{\circ}$ Elbow

| Name | Size | Code |
| :---: | :---: | :---: |
| $30^{\circ}$ Elbow | 50 mm | 1180264 |
| $60^{\circ}$ Elbow | 50 mm | 1180265 |

(For use with CPVC Flange)

| Name | Size | Code |

15) Primer

| Name | Size | Code |
| :---: | :---: | :---: |
| Primer | 500 g | 1180315 |
|  | 1 kg | 1180316 |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

## (1) Property of CPVC

1) What's CPVC (Chlorinated Polyvinyl Chloride)?

- CPVC is kind of chloride synthetic resin that marks an epoch in reinforcing thermal resistance, bar tolerance, impact resistance, mechanical strength and corrosion resistance, compared to the existing PVC.

* CPVC is made from ethylene generated from petroleum or natural gas and chloride salt.

2) Utility of CPVC

- Sprinkler Plumbing System (For firefighting) : Wet plumbing of light fire breaking area
- Plumbing System for Industrial Chemistry (For industrial utility)
: Various kinds of acid and sewage discharging plumbing
- Plumbing System for cold \& hot water (For construction) : Piping materials for drinking water
* CPVC has been applied to fire fighting field, construction field and other fields since CPVC used in the USA in 1959.

3) Basic Property of Matter

| Property |  | Unit | Method of Test | PB | C-PVC |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Physical <br> Property | Specific Gravity | - | ASTM D1505 | 0.937 | 1.53 |
|  | Stiffness | D scale | ASTM D2240 | 60 | 140 |
|  | Absorption rate | $\mathrm{mg} / \mathrm{mm}^{2}$ | JIS K7209 | Below 0.01 | 0.04~0.06 |
| Mechanical Property | Tensile Strength | $\mathrm{kgf} / \mathrm{mm}^{2}$ | ASTM D638 | 170 | 500~550 |
|  | Modulus of Elasticity | $\mathrm{kgf} / \mathrm{mm}^{2}$ | ASTM D638 | 2700 | 30000 |
|  | Ratio of Poisson | - | - | 0.38 | 0.38 |
|  | Impact Strength | kgf/m² | JIS K7110 | 4.5 | 8.0 |
| Thermal Property | Rate of Expansion | $\mathrm{cm} / \mathrm{cm}{ }^{\circ} \mathrm{C}$ | D696 | $1.3 \times 10^{-4}$ | $6.2 \times 10^{-5}$ |
|  | Specific Heat | $\mathrm{cal} /\left(\mathrm{g} .{ }^{\circ} \mathrm{C}\right)$ | - | 0.5 | 0.2~0.3 |
|  | Thermal Conductivity | W/mk | C177 | 0.38 | 0.14 |
|  | Melting Point | ${ }^{\circ} \mathrm{C}$ | DTA | 124~126 | 150~160 |
| Electrical Property | Bulk Specific Resistance | ת.cm | ASTM D257 | Above $10^{17}$ | Above $10^{15}$ |
|  | Withstanding Voltage | kV/mm | ASTM D149 | 38 | Below 40 |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

## (2) Characteristic of CPVC Plumbing

1) Corrosion Resistance and Hygiene

- No corrosion and scale: No rust and pipe clogging (Corrosion resistance is proved against various chemical environment such as acid, alkali, salt and halogen)
- CPVC material and conjugating adhesive are harmless to human body and ecology
(It's used as plumbing for drinking water : Acknowledged by NSF)
- Bacteria is refrained from generating with antibacterial material

2) When CPVC is revealed to fire,

- Function of self-fire extinction is procured.
(If CPVC burns, three times as much as the amount of oxygen is necessary at the present earth.)
- In case applying heat, CPVC never spreads fire and becomes ash.
- The toxicity of smoke occurs rarely more than common architectural materials
(From the test result of burning from Pittsburgh University and environment)

Copper Pipe

C-PVC Pipe

| Materials | Limited <br> Rate of Oxygen | Remark |
| :---: | :---: | :---: |
| CPVC | 60 |  |
| Surface | $16 \sim 17$ |  |
| PE | 17 |  |
| PP | 18 |  |
| PS | 18 |  |
| PB | 18 |  |
| White <br> Birch | 20 |  |

* Firing Test of CPVC Plumbing KFITI (Korea Fire Industry Technology Institute)

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

3) Low Rate of Friction Loss

- As CPVC plumbing has a greater fluid flowing coefficient(C), loss amount by friction is little.

f: Loss by friction per 100ft of pipe
d : Inner diameter of pipe(inch)
g: Flux(gal/min)
c: Fluid flowing coefficient (degree of smoothness for the inner wall of pipe, no change occurs for the coefficient according to lapse (of time)

| Flux ( $\boldsymbol{\ell}$ ) | Loss amount by Pressure (m) |  |  |  | C <br> (fluid flowing <br> coefficient) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3.78 | 18.92 | 37,85 | 75.70 |  |
| CPVC Pipe | 0.10 | 1.94 | 6.99 | 150 |  |
| Coper Pipe | 0.13 | 2.52 | 9.11 | 32.90 | 130 |
| Zinc Alloy Pipe | 0.17 | 3.44 | 12.42 | 44.83 | 120 |
| Cast Iron Pipe | 0.21 | 4.10 | 14.81 | 53.48 | 100 |

※ Loss amount by pressure means fluidal pressure reduced amount per $1^{\prime \prime} 30 \mathrm{~m}$.
4) Reduction of Loss of Heat and Greenhouse Gases

- As CPVC pipe has low thermal conductivity, it has excellent heat insulation effect and no dew condensation phenomenon.
- The noise in flowing water through CPVC pipe is rare and pressure occurred by water hammer is approximately $1 / 3$ of steel pipe.
- As CPVC pipe has low discharging rate of $\mathrm{CO}_{2}$, this pipe contributes to the reduction of greenhouse gases

| Quality of <br> Material | Thermal <br> Conductivity <br> (W/mk) |
| :---: | :---: |
| Steel Pipe | 42.74 |
| Copper Pipe | 320 |
| PB | 0.22 |
| PP-R | 0.24 |
| PE-X | 0.41 |
| CPVC | 0.14 |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

5) Construction and Cost Efficiency

- Easy jointing with solvent bond
- CPVC pipe is light, easy to cut, assemble and install more than the existing plumbing material, so the cost of installation is cheap and there's no cost for replacement because of no corrosion and scale.

## (3) Size of Product

1) Pipe

- ASTM 442 (SDR 13.5) suitable for the performance of US NFPA and domestic synthetic resin pipe for firefighting is applied.

| Nominal <br> Diameter |  | Steel Pipe <br> (KS D 3507) |  |  | Copper Pipe <br> (KS D 5301) |  |  | CPVC <br> (ASTM F442) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| inch | mm | Outer <br> Diameter | Inner <br> Diameter | Thickness | Outer <br> Diameter | Inner <br> Diameter | Thickness | Outer <br> Diameter | Inner <br> Diameter | Thickness |
| 1 | 25 | 34 | 27.5 | 3.25 | 28.58 | 26.04 | 1.27 | 33.4 | 28.48 | 2.46 |
| $1-1 / 4$ | 32 | 42.7 | 36.2 | 3.25 | 34.92 | 32.12 | 1.4 | 42.16 | 35.92 | 3.12 |
| $1-1 / 2$ | 40 | 48.6 | 42.1 | 3.25 | 41.28 | 38.24 | 1.52 | 48.26 | 41.10 | 3.58 |
| 2 | 50 | 60.5 | 53.2 | 3.65 | 53.98 | 50.24 | 1.78 | 60.33 | 51.39 | 4.47 |

※ SDR (Standard Volume Rate): Average rate of outer diameter per the thickness of pipe
2) Fittings

- ASTM F438 standard satisfying the size of pipe (ASTM F442) was adapted. (Minimum standard)

| Nominal <br> Diameter |  | Pipe (F442) |  |  |  | Fitting <br> (F438) |  | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| inch | mm | Outer <br> Diameter | Inner <br> Diameter | Thickness | Outer <br> Diameter | Inner <br> Diameter | Thickness |  |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

## (4) Standard of Quality

- We use the product acknowledged by the standard of performance test for synthetic resin plumbing for firefighting noticed by minister of PAS(Public Administration \& Security) [No. 1998-76, Notice of MOPAS (Ministry of Public Administration \& Security), 1998. 8. 24]

| No | Classification | Detailed Contents | Standard of Test | Remark |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Shape \& Structure | 1) Structure \& Outlook | Roundness and outlook should be more than standard |  |
| 2 | Function <br>  <br> Strength | 1) Tensile Strength | After applying regular standard, The tensile strengt $h$ should be $16 \mathrm{~N} / \mathrm{mm}^{2}$ at $15^{\circ} \mathrm{C}$. | KS M 3006 |
| 3 |  | 2) Rupture Test | No crack should exist. (890N x 5 min ) No abnormality should exist for The inspection of inner pressure after the test. |  |
| 4 |  | 3) Bending Test | More than $75 \%$ of minimum bending radius isn't all owed. | $18^{\circ} \mathrm{C} / 21^{\circ} \mathrm{C}$ |
| 5 |  | 4) Flame Retardation Efficiency | It's good to be classified into HB. | KS M 3015 C |
| 6 |  | 5) Weatherproofing Efficiency | Foam, swelling and peeling aren't allowed. | Refer the standard of test |
| 7 |  | 6) Fire Endurance Test | Explosion, separation and leakage aren't allowed. | Refer the standard of test |
| я |  | 7) Impact Test | After revealing the pipe under $-18^{\circ} \mathrm{C}, 0^{\circ} \mathrm{C}$ and $20^{\circ} \mathrm{C}$ for 24 hours. <br> The pipe should be suitable for the inspection of pressure resistance after test. | The length of 0.9 kg steel pole is 0.6m |
| 9 |  | 8) Test of Loss Amount by Impact | Install the barometer on the both sides of 6 m pipe |  |
| 10 |  | 9) Water-hammer Test | After test alternation rate of 3,000 times should be done for the alternating rate of $0 \sim$ maximum pressur e per 10 minutes, no error isn't allowed in the test of inner pressure. |  |
| 11 |  | 10) Repetitive Test of Temperature | After revealing the pipe for 24 hours according to each temperature from the pressure of $3.5 \mathrm{~kg} / \mathrm{cm}^{2}$ water at $0 \sim$ maximum temperatures, test the 1st cycle for 5 times should be performed and satisfies the test of inner pressure. | Plumbing that 10 times of nominal diameter in length |
| 12 |  | 11) Vibration Test | After applying water pressure of $1 \mathrm{~kg} / \mathrm{cm}^{2}$, vibration of 0.5 m in amplitude and $25 \pm 5 / \mathrm{sec}$ for 5 hours, the pipe should satisfy the test condition of inner pressure | Plumbing of 1 m |
| 13 |  | 12) Internal Pressure Test | After applying 5 times as strong as the maximum utilized water pressure for 1 minute, no leakage or Metamorphosis is allowed. |  |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

## (5) Selection of Piping Diameter

- To calculate the diameter of plumbing and then select excellent diameter of plumbing, all the heads should satisfy the discharging amount of more than $80 \ell / \mathrm{min}$ with a waterproofing pressure standard of $1 \mathrm{~kg} / \mathrm{cm}^{2}$. (Calculate the flow rate of branch plumbing at less than $6 \mathrm{~m} / \mathrm{sec}$ and the flow rate of other plumbing at less than $10 \mathrm{~m} / \mathrm{sec}$.)
- The diameter of plumber should be calculated according to [asterisk 1] of fire safety standard for sprinkler.

| Classification (Uniameter | 25 | 32 | 40 | 50 | 65 | 80 | 90 | 100 | 125 | 150 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | 2 | 3 | 5 | 10 | 30 | 60 | 80 | 100 | 160 | Above 161 |
| B | 2 | 4 | 7 | 15 | 30 | 60 | 65 | 100 | 160 | Above 161 |
| C | 1 | 2 | 5 | 8 | 15 | 27 | 40 | 55 | 90 | Above 91 |

A: The number of head in case of installing lockout-typed sprinkler
B: In case of installing lockout-typed sprinkler and establish the head under the ceiling and inside of the ceiling as an annex.
C: In case of installing the sprinkler to the place where the stage or specific inflammables are stored and managed.

## (6) Thermal Expansion and Treatment of Expansions \& Contractions

1) Formula about thermal expansion ( $\triangle \mathrm{L}$ )

* CPVC pipe expands and contracts according to temperature like other quality of pipes.
( The coefficient of linear expansion is $0.000062 \mathrm{~cm} / \mathrm{cm}^{\circ} \mathrm{C}$ and the efficient is applied to the dimension of CPVC pipe identically.)
$\Delta \mathbf{L}=\mathbf{e} \cdot \mathbf{L} \cdot \triangle \mathbf{T} \quad \mathrm{e}: 6.2 \times 10-5 \mathrm{~cm} / \mathrm{cm}{ }^{\circ} \mathrm{C} \quad \mathrm{L}:$ Length of Plumbing $\quad \triangle \mathrm{T}:$ Changing of Temperature

| Changing of <br> Temperature | Length of Plumbing(m) |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 4 | 10 | 20 | 30 | 40 |  |
| 10 | 0.06 | 0.12 | 0.25 | 0.62 | 1.24 | 1.86 | 3.10 |  |
| 20 | 0.12 | 0.25 | 0.5 | 1.24 | 2.48 | 3.72 | 6.20 |  |
| 30 | 0.19 | 0.37 | 0.74 | 1.86 | 3.72 | 5.58 | 9.30 |  |
| 40 | 0.25 | 0.50 | 0.99 | 2.48 | 4.96 | 7.44 | 12.40 |  |
| 50 | 0.31 | 0.62 | 1.24 | 3.10 | 6.20 | 9.30 | 15.50 |  |

2) Calculation of Expansions \& Contractions

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

- Pipe Outside Diameter

| Dimension(Inch) | $1 / 2$ | $3 / 4$ | 1 | $1-1 / 4$ | $1-1 / 2$ | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Classification | 0.84 | 1.05 | 1.32 | 1.66 | 1.90 | 2.38 |
| cm | 2.1 | 2.7 | 3.3 | 4.2 | 4.8 | 6.0 |

- Allowable Stress and Expansion \& Contraction

| Temperature $\left.{ }^{\circ} \mathrm{C}\right)$ | 23 | 38 | 49 | 60 | 71 | 82 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Classification | 25.664 | 25.032 | 24.329 | 23.203 | 21.656 | 19.688 |
| S | 141 | 113 | 91 | 70 | 53 | 35 |

- Formula

| $\ell=(3 \mathrm{ED} \triangle \mathrm{L} / 2 \mathrm{~S}) 1 / 2$ |  |
| :--- | :---: |
| $\ell=$ Length of Expansion \& Contraction $(\mathrm{cm})$ |  |
| $E=$ Coefficient of Expansion \& Contraction $\left(\mathrm{kgf} / \mathrm{cm}^{2}\right)$ | $\Delta \mathrm{L}=$ Change of Length According to Temperature $(\mathrm{cm})$ |
| D = The average outer diameter of the pipe $(\mathrm{cm})$ | $\mathrm{S}=$ Maximum Allowable Pressure $\left(\mathrm{kgf} / \mathrm{cm}^{2}\right) \triangle$ |

- Example of Expansion \& Contraction by Temper

If $\triangle T=15^{\circ} \mathrm{C},\left(23^{\circ} \mathrm{C}-38^{\circ} \mathrm{C}\right)$

| Classification <br> Dimension | Length of Plumbing (m) |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 | 27 | 30 | 36 | 42 | 48 |
|  | (cm) : ¢ |  |  |  |  |  |  |  |  |  |  |  |  |
| $1 / 21$ | 14 | 19 | 24 | 28 | 31 | 34 | 37 | 39 | 42 | 44 | 48 | 52 | 56 |
| $3 / 4 "$ | 15 | 22 | 27 | 31 | 35 | 38 | 41 | 44 | 47 | 49 | 54 | 58 | 62 |
| $1{ }^{\prime \prime}$ | 17 | 24 | 30 | 35 | 39 | 42 | 46 | 49 | 52 | 55 | 60 | 65 | 70 |
| $1^{11 / 4 "}$ | 19 | 27 | 34 | 39 | 44 | 48 | 52 | 55 | 59 | 62 | 68 | 73 | 78 |
| $11 / 2 "$ | 21 | 29 | 36 | 42 | 47 | 51 | 55 | 59 | 63 | 66 | 73 | 78 | 84 |
| 2 " | 23 | 33 | 40 | 47 | 52 | 57 | 62 | 66 | 70 | 74 | 81 | 88 | 94 |

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

## (7) Plumbing Installation

1) Assembling \& Connecting Method of CPVC Pipe

2) Apply adhesive.
(Connecting fittings)

- Apply the adhesive on the inside of fittings thinly and evenly.
-Apply the adhesive on the fittings with the brush 2 or 3 times.

## 3) Apply adhesive.(Pipe)

- Apply the adhesive on the area of $1 / 2$ of pipe.
-Apply the adhesive on the end of pipe thickly.
- Apply the adhesive on the pipe with the brush 2 or 3 times.

## 5) Assemble the pipes.

- When inserting the pipe into the fittings, insert and turn the pipe $1 / 4$ circle, and leave the pipe for 10~15 seconds.
-Confirm if bubbles exist on the assembled parts.
-In case of assembling nut/bolt, wind teflon tape on the bolt enough.

6) Observe hardening period.
-Observe the initial Hardening and full hardening time by all means.

- In case of applying any treatment and pressure, any breakage may occur.

## How to Treat

 exclusive CPVC Adhesive- Keeping the pipes and fittings, clean, apply the adhesive after removing any moisture.
- Don't use the adhesive excessively.
(Resistance of flowing)
- Don't use the solid or jelly type adhesive.
- Be careful of sparks and flames.
- Close the cap after using the adhesive.
- Avoid contact from eyes/skin from the adhesive.
- Observe the minimum lapse time after connecting the pipe to the fittings.

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

2) Construction of Pipe

* Data of Hardening \& Using Amount of Adhesive
- Initial Hardening Period (Average Initial Setting Schedule)

| Coverage of Temperature | Dimension of Pipe | Dimension of Pipe |
| :---: | :---: | :---: |
|  | $11 / 2^{\prime \prime} \sim 1^{1 / 4^{\prime \prime}}$ | $1 \frac{1}{2 \prime \prime} \sim 2^{\prime \prime}$ |
| $15 \sim 38^{\circ} \mathrm{C}$ | 2 Minutes | 5 Minutes |
| $4 \sim 15^{\circ} \mathrm{C}$ | 5 Minutes | 10 Minutes |
| $-17 \sim 4^{\circ} \mathrm{C}$ | 10 Minutes | 15 Minutes |

Note : Initial hardening period means the period that you should observe before moving the connected part after connecting the initial pipe to the fittings. Namely, you can move the connected parts after observing the initial hardening time according to each size.
Only, you should apply the period of one and half times to each initial hardening period in the humid weather.

- Average Hardening Period (Average Joint Cure Schedule)

| $\begin{array}{c}\text { Less than relative } \\ \text { humidity of } 60 \%\end{array}$ | $\begin{array}{c}\text { Hardening Period } \\ 1 / 2^{\prime \prime} \sim 1 \\ \hline\end{array} 4^{\prime \prime}$ |  |
| :---: | :---: | :---: | :---: | :---: |\(\left.\quad \begin{array}{c}Hardening Period <br>

11 / 2^{\prime \prime} \sim 2^{\prime \prime}\end{array}\right]\)

Note : Hardening period of connected part means the minimum time before applying any pressure to the pipe. Only, you should apply the period of one and half times to each initial hardening period in the humid weather.
*This value came from the laboratory, not from the site. In case you use the pipe for convoying chemicals, above values may be incorrect and the hardening period needs mostly more than the above values. As there are different variables at the real site, you should make use of the above $h$ ardening period as general guidance. (Namely, minimum due hardening period)

## - Number of Connectable Fittings per 1 unit (solvent cement) (Average Number or Joint/Qt.)

| Dimension <br> of Pipe | $1 / 2^{\prime \prime}$ | $3 / 4^{\prime \prime}$ | $1^{\prime \prime}$ | $1 \frac{1 / 2^{\prime \prime}}{}$ | $2^{\prime \prime}$ | $3^{\prime \prime}$ | $4^{\prime \prime}$ | $6^{\prime \prime}$ | $8^{\prime \prime}$ | $10^{\prime \prime}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number <br> of Connections | 300 | 200 | 125 | 90 | 60 | 40 | 30 | 10 | 5 | $2 \sim 3$ |

Note (In Case of Primer) : Primer can be used twice as much as solvent cement on the connections by each dimension. The above values came from the laboratory, not from the site. As there are different variables at the real site, you should make use of the above hardening period as general guidance.

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

3) Method of Connecting Sprinkler (In case of connecting SP Flexible Joint)

4) In case of connecting SP flexible joint in a household, connect CPVC to nut typed joint.
5) Connect CPVC 25 mm valve socket to CPVE directly after remove the nipple of SP flexible joint.
6) CPVC valve socket can be classified in accordance with the type of SP jointing nut

- 'inch' dimension of SP joint: 11 threaded CPVC ( 25 mm ) valve socket
- 'mm' dimension of SP joint: P1.5 CPVC (25mm) valve socket

4) Don't use Teflon or chemical adhesive in connecting the socket to SP joint.

- In case of applying Teflon, any leakage may happen
because the valve socket doesn't stick to the o-ring of SP joint.

4) Connecting to the Other Material

5) In case of connecting to the other material (steel pipe), joint the pipe, connecting CPVC valve socket (PT bolt type) to a steel socket.
6) In case of connecting CPVC valve socket to a steel socket, connect them after applying Teflon to the valve socket.

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

5) Hanger \& Backstay Device (NFPA 13, NFPA 13R)
-According to the standard of NFPA 13 and NFPA 13R Design the hanger to bear the weight that 250 lb $(113 \mathrm{~kg})$ is added to the weight of 5 times as heavy as the pipe of sprinkler filled with water at each back stay point.

- Recommendable minimum area of hanger is 12.2 mm ( 0.5 in ).
- In case of operating a sprinkler, determine the interval of backstay for the synthetic resin pipe narrowly, considering the reactive power of discharged water.
* Interval of Backstay by pipe

| Material of Sprinkler | Dimension * (mm) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | DN20 | DN25 | DN32 | DN40 | DN50 | DN65 | DN80 |
|  | Interval of Backstay * (M) |  |  |  |  |  |  |
| Steel Pipe (Connected by Welding) | N/A | 3.7 | 3.7 | 4.6 | 4.6 | 4.6 | 4.6 |
| Steel Pipe (Connected by Bolt/Nut) | N/A | 3.7 | 3.7 | 3.7 | 3.7 | 3.7 | 3.7 |
| Copper Pipe | 2.4 | 2.4 | 3.0 | 3.0 | 3.7 | 3.7 | 3.7 |
| CPVC Pipe | 1.7 | 1.8 | 2.0 | 2.1 | 2.4 | 2.7 | 3.0 |

6) Test of Water Pressure

- Keep the hydraulic pressure test at $20 \mathrm{~kg} / \mathrm{cm}^{2}$ which is one and half times of $12.3 \mathrm{~kg} / \mathrm{cm}^{2}$, maximum utilized pressure.
- Maintain the hydraulic pressure for test below $3 \mathrm{~kg} / \mathrm{cm}^{2}$ in case of applying air or compressed air in winter.
- Use glycerin as anti-freezing solution for the test of water pressure in winter.

## 7) Preventive Countermeasure of Freeze

To prevent freezing, you can refer several methods such as pipe design, insulating materials, lagging materials and self-regulating heat cable. However, as it's difficult to apply lagging materials fo $r$ indoor/outdoor piping, you'd better use an engineering with self-regulating heat cable preventing Dew condensation, providing regular amount of thermal energy. You don't need to apply lagging treatment for the pipes inside of household and should observe the depth of Dew condensation for the pipe installed under the ground.

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

8) Cautions in Treating the Products

- In processing CPVC pipe with heat, higher temperatures more than PVC pipe and thermal processing at the site makes the surface of pipe deteriorate, so you should process the sleeve and band with heat after consulting with the related main office.
- In case of maintaining CPVC pipe and fittings, cover with a pavilion to avoid a direct ray of light and heat.
- Don't use grooved or scarred pipe or fittings. Also, don't apply nut/bolt to the fittings directly.
- In cutting pipe, use a cutter for exclusive use(below the standard of 2 inches) or grinding stone cutter. (Don't use a metal cutter.)
- Don't cut the pipe at a tilt or remove the burr or impurities on the end of cut pipe because it is the cause of leakage or crack in connecting the pipe to the joint.
- Don't spray or apply the agents such as acetone, thinner, creosote and insecticide affecting harmfulness on the pipe.
- Be careful not to drop while transporting or piping with tools as impact strength is very strong.
- In case of connecting M valve socket (25mm) to SP joint, avoid Teflon or adhesive on the thread of bolt/nut. (Any leakage may occur due to the damage of o-ring.)

9) Example of CPVC Piping

Sprinkler Pipes of Apartment

Sprinkler Pipes of Apartment

## (8) Examination of Dew condensation

(1) Present condition of the lagging material for the fire pipe of sprinkler in the apartment
(a) Regulations related to Fire Law according to construction of lagging materials

- Regulations : Article 8, Fire Safety Standard of Sprinkler
- Contents : Materials should be installed at the place where any countermeasure for preventing freezing or no freezing occurs.
(b) Research of the example for the lagging materials

| Classification |  | Piping Material | Construction of <br> Lagging materials | Remark |
| :--- | :---: | :---: | :---: | :---: |
| Public Housing | J Construction | Copper Pipe + SP Joint | Foaming PE 10t |  |
|  | S Construction | Copper Pipe + SP Joint | Foaming PE 10t |  |
|  | HR Construction | C-PVC + SP Joint | Foaming PE 10t |  |
|  | G Construction | Steel Pipe + SP Joint | Foaming PE 10t |  |

(2) Examination of Dew condensation for Main Pipe
(a) Examination of Determining Dew condensation

$$
T_{s}=T_{a}+\frac{T_{i}-T_{a}}{1+\frac{\alpha}{2 \lambda} \ln \frac{D_{o}}{D_{i}} \cdot D_{o}} \quad(\mathrm{KS} \mathrm{~F} \mathrm{2803)}
$$

## $\therefore$ Condition of Dew Condensation : Surface Temperature(Ts) $\leq$ Dew Point Temperature(T")

## 3. CPVC Synthetic Resin Utilized Sprinkler Facility Technology

(b) Examination of Dew condensation for Main Pipe

- Comparison of Specification by Each Pipe Material (Ф25mm)

| Classification |  | Steel Pipe | Copper Pipe | C-PVC Pipe | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\lambda$ | Thermal Conductivity (W/mk) | 42.74 | 320 | 0.137 |  |
| $\alpha$ | Convection Current <br> Coefficient of Surface(W/mK) | 8 | 8 | 5.7 |  |
| Di | Inner Diameter(mm) | 27.5 | 26.4 | 28.48 |  |
| Do | Outer Diameter(mm) | 34.0 | 28.58 | 33.4 |  |

- Examination of Dew Condensation by Each Pipe Material

| Ti | Indoor Temperature \& Humidity |  | Surface Temperature of Pipe |  |  | Dew condensation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Dry-bulb Temperature ( Ta ) | Dew Point Temperature (T") (Relative Humidity 70\%) | Steel Pipe | Copper Pipe | C-PVC Pipe |  |
| 5 | 0 | -4.2 | 2.7 | 3.6 | 0.0 |  |
| 5 | 10 | 4.8 | 7.3 | 6.4 | 10.0 | Steel Pipe, Copper Pipe |
| 5 | 20 | 14.4 | 11.9 | 9.1 | 19.9 | Steel Pipe, Copper Pipe |
| 10 | 5 | 0 | 7.7 | 8.6 | 5.0 |  |
| 10 | 10 | 4.8 | 10.0 | 10.0 | 10.0 |  |
| 10 | 20 | 14.4 | 14.6 | 12.7 | 19.9 | Copper Pipe |
| 10 | 30 | 23.9 | 19.2 | 15.4 | 29.8 | Steel Pipe, Copper Pipe |
| 15 | 10 | 4.8 | 12.7 | 13.6 | 10.0 |  |
| 15 | 20 | 14.4 | 17.3 | 16.4 | 20.0 | Steel Pipe, Copper Pipe |
| 15 | 30 | 23.9 | 21.9 | 19.1 | 29.9 | Steel Pipe, Copper Pipe |
| 20 | 10 | 4.8 | 15.4 | 17.3 | 10.0 |  |
| 20 | 20 | 14.4 | 20.0 | 20.0 | 20.0 |  |
| 20 | 30 | 23.9 | 24.6 | 22.7 | 29.9 | Steel Pipe, Copper Pipe |
